

GIT ASSIGNMENT 03

The screenshot shows the IntelliPaaS LMS interface. The left sidebar contains a navigation menu with sections: SELF-PACED, LIVE CLASSES, and STUDY MATERIALS. Under STUDY MATERIALS, there are modules and projects. The main content area displays 'Project 3 - Publishing Amazon SNS Messages Privately' with a progress bar at 78%. The project details include:

- Industry:** Healthcare
- Problem Statement:** How to secure patient records online and send it privately to the intended party
- Topics:** In this project, you will be working on a hospital project to send reports online and develop a platform so the patients can access the reports via mobile and push notifications. You will publish the report to an Amazon SNS keeping it secure and private. Your message will be hosted on an EC2 instance within your Amazon VPC. By publishing the messages privately, you can improve the message delivery and receipt through Amazon SNS.
- Highlights:**
 1. AWS CloudFormation to create a VPC
 2. Connect VPC with AWS SNS
 3. Publish message privately with SNS

A 'Download Attachment' button is visible at the bottom right of the project details.

The screenshot shows the IntelliPaaS LMS interface for 'Project 3 - Solution'. The left sidebar is the same as the previous screenshot. The main content area displays 'Project 3 - Solution' with a progress bar at 4 / 13. The project details include:

- Amazon EC2 instance that's launched into the subnet in the VPC.**
- Amazon SNS topic.**
- Two AWS Lambda functions.** These functions receive messages that are published to the Amazon SNS topic, and they log events in CloudWatch Logs.
- Amazon CloudWatch metrics and logs.**
- An IAM role that allows the Amazon EC2 instance to use Amazon SNS, and an IAM role that allows the Lambda functions to write to CloudWatch logs.**

To create the AWS resources

1. Download the template file from their [GitHub site](#)
2. Sign in to the AWS Management Console
3. Choose Create Stack
4. On the Select Template page, choose Upload a template to Amazon S3, select the file, and choose Next
5. On the Specify Details page, specify stack and key names:
 - a. For Stack name, type VPCE-Tutorial-Stack
 - b. For KeyName, choose VPCE-Tutorial-KeyPair
 - c. For SSHLocation, keep the default value of 0.0.0.0/0

A 'Download Attachment' button is visible at the bottom right of the project details.
